Personal Statement

A hard working Front End Developer, I have a keen interest in animation, user interaction and webpage aesthetics. I really enjoy the problem solving aspect and creativity that comes with writing javascript. With a constant desire to learn more about web development workflow and the relationship between the front end and back end, I am always seeking to learn more. Currently I am teaching myself Ruby on Rails.

Previous Employment

AML - Junior Front End Dev

June 2014 - present

AML has been my first experience of creating rich media, javascript powered animations for international online campaigns. Learning from the ground up, I write efficient, reusable code in order for it to be adapted for many different formats, languages and specifications.

I take the team lead when we use freelancers, ensuring that we are adhering to the same workflow and the ad production is kept to a required standard.

Learning web development workflows, software packages and leading freelancers has been invaluable experience for me.

HPS - Creative / Artworker

April 2012 - June 2014

As a studio junior, my role included working on the creative team producing concepts, to artworking quarterly publications, including online work.

It also involved creating online Flash banners, something which I excelled at, and was picked to attend an internal course.

At the same time I learned about building HTML emailers and became a key member of the team for this. I took the lead and responsibility for email production.

Canvas Framing Shop - Picture Framer

Jan 2011 - Jan 2012

I was the sole framer in this small but busy art shop. My duties were to cut the glass and picture frame mold to the required dimensions, and frame each bespoke piece of art. This was a fun job to do after university.
